
PhenoCam vs model transition dates, PhenoCam BDT pixels, 30-d nowcast windows anchored on the fixed-DOY-band event window (ev2)
LCSIF window (observed)
TFT
PhenoFormerSeq
4GST (OLS extrap.)
within-site r = 0.37
49 sites ≥5 y, slope 0.11
within-site r = -0.09
49 sites ≥5 y, slope -0.04
within-site r = -0.05
49 sites ≥5 y, slope -0.02
no site with ≥5 matched years
(too many forecasts never cross)
within-site r = -0.10
56 sites ≥5 y, slope -0.01
within-site r = -0.17
56 sites ≥5 y, slope -0.03
within-site r = -0.16
56 sites ≥5 y, slope -0.02
within-site r = -0.11
21 sites ≥5 y, slope -0.03
SOS: model anomaly (d)
EOS: model anomaly (d)
PhenoCam anomaly (d)
test period 2008–10
train period ≥2011 (in-sample)
2011–2021 lie in the training years of the TFT and PhenoFormerSeq checkpoints (in-sample); only 2008–2010 are test years. LSTM omitted (categorical embeddings not saved).
